

# Certified Scrum Master®

Scrum® is a framework which is derived from practical experiences to enable us to master the most important challenges (increased complexity of products/projects, ambitious delivery targets etc.) in product development. Scrum® is a frame and it needs to be filled, based on existing circumstances and ambitions of the project/environment. There is no single receipt for this venture, but you will be pointed towards some strategies to do so. The full potential of the framework grounds on continuous adaptation and optimization based on the build in feedback loops.

You will not only learn about the Scrum® framework and about the ScrumMaster® role – what is essential, of course. But what is even more so is to really grasp the underlying principles so that you will be enabled to see how Scrum® could fit into your environment. The course is for you if you are relatively new to Scrum® or if you are interested to deepen your Scrum® Skills.

The focus of the two days is on linking the underlying intentions of Scrum® with first hands-on training experiences. You will be guided through a training simulation so that you will not just hear about Scrum®, but start to feel and experience it for yourself, enabling a deeper understanding and also enabling the ability to ask deeper questions. So that you can improve your Scrum®!

## What You will learn

- Principles & intentions behind Scrum®
- The essential core of the Scrum® framework
- Scrum roles and responsibilities in a Scrum® team
- How to plan for a multi-team, multi-sprint environment
- Common challenges when introducing Scrum® to an organization

### Who should attend this training:

Anyone interested in starting a Scrum® project or wishing to improve their current Scrum® implementation. Naturally intended for those taking on the ScrumMaster® role, it is equally useful for any Scrum® team member.

# Certified Scrum Master®

## General requirements to become a Certified ScrumMaster®

To earn your CSM® certificate, you must take a CSM® course from a Certified Scrum Trainer® and demonstrate your progress through our online CSM® test. The first step toward your CSM® is familiarizing yourself with Scrum®. We've compiled a list of resources that can help you see how Scrum® transforms the world of work. Then attend an in-person, two-day CSM® course taught by a Certified Scrum Trainer®. After successfully completing the course, you will need to pass the CSM® test. To get a passing score, you must correctly answer 24 of the 35 questions. After you pass the CSM® test, you will be asked to accept the License Agreement and complete your Scrum Alliance® membership profile.

All CSM® courses are taught by Certified Scrum Trainers®. Taking a CSM® course, passing the CSM® test and accepting the license agreement designates you as a Certified ScrumMaster®, which indicates that you have been introduced to and understand the basic concepts you need to perform as a ScrumMaster® or team member on a Scrum® team. This course also satisfies two elements of the CSD track: Scrum® Introduction and Elective.
